### RAIN BIRD COMPLETES ITS CONTROL ZONE KITS WITH THE ADDITION OF 9V MODELS

Control zone kits provide all of the components necessary to control flow, pressure and filtration for a low volume irrigation zone. In addition to its standard control zone kits, Rain Bird is introducing some new models available with pre-installed latching solenoid to work with battery-powered controllers.

IXZ-100-TB05

#### Easy-to-install

These kits include a valve (3/4" or 1") and a pressure regulating RBY filter. All models are shipped fully assembled for added convenience. This design reduces the number of components in Control Zone Kits and makes the installation more compact. Because more control zones can fit in a valve box, fewer valve boxes are needed for each system, significantly reducing installation time.

#### Reliable

Rain Bird control zone kits are the most reliable on the market with proven low flow valve or DV valve and fewer threaded connections which mean less chance of a leak both at installation and over the life of the system.
