### **RAIN BIRD INTRODUCES NEW PRESSURE-REGULATING QUICK-CHECK BASKET FILTERS FOR DRIP IRRIGATION**

Installing and maintaining low volume irrigation systems just got even easier and more efficient. Rain Bird's NEW Pressure-Regulating, Quick-Check Basket Filter combines pressure regulation and filtration into one compact unit for enhanced reliability and faster installation.

Quick-Check Basket Filter is the latest addition to Rain Bird's broad line of drip irrigation products. Its 75 micron stainless-steel filter element protects drip irrigation components from debris, while its built-in 2,8 bar pressure regulator ensures that the system receives optimum water pressure.

By integrating filtration and pressure regulation into one product, we're saving time and money for contractors and specifiers. The new unit's compact size allows it to fit into smaller, less expensive valve boxes. It also takes less time to assemble because it requires fewer connections, reducing both labor and maintenance costs. Rain Bird's PR Quick-Check Basket Filter's quick-check indicator also takes the guesswork out of maintenance with its unique display that clearly shows when the filter needs to be cleaned.
