

## Nursery

### Project Details

#### PROPERTY:

Baumschule Leibl

Elbinger Straße 10, 94315 Straubing,  
Deutschland

#### IRRIGATION DISTRIBUTOR:

Walter Müller GmbH

#### COMPLETION DATE:

September, 2018

#### PRODUCTS USED:

- LXME / IQ Cloud
- XB-PC and XS Adj. Flow sprays
- 8.000 m<sup>2</sup> Dripline XFS
- 19.000 m Dripline A5PC/C5PC

#### SPECIFICATION MANAGER:

Björn Mühlbauer RBD

### Project Overview:

The tree nursery founded in 1880 is economically very important for Straubing. Due to the hot summer, the customer became aware of the high water consumption. Partially the irrigation failed and nobody noticed it fast enough.

### Challenge:

A stable and water-efficient irrigation system that displays irrigation hazards and is resistant to pollution and rooting. Nevertheless, the irrigation system should be mobile and able to adjust quickly and easily to changing plant conditions.

### Solution:

The irrigation system coordinated with Walter Müller GmbH guarantees a good use of the almost daily changing irrigation areas at the container plants. The irrigation controller adjusts the water consumption automatically to the weather conditions. The changing plants can be monitored centrally and conveniently from the main office.

Furthermore with the Dripline XFS we found a pollution-resistant and rooting-proof solution.

“We are convinced of the good solution with the irrigation control, the excellent material quality as well as the competent and quick service.”

- Martin Schießl, nursery Leibl
